

NOVA THREE PHASE RECLOSER SERVICE

Product before servicing is shown in the pictures below

Final product after servicing is shown in the pictures below

The Power of Restoration

The PTI Service Center received a Cooper Power Systems NOVA27 three phase recloser from BC Hydro. It had been installed on the distribution system, but a fallen tree limb onto the overhead lines caused a flashover.

The NOVA recloser was sent to Partner Technologies Inc. for inspection to determine if it could be serviced and repaired. Closer inspection performed at PTI revealed the cycloalaphatic encapsulations did not suffer any serious damage. Instead, the recloser only required detailed external cleaning, and a minimum amount of servicing to restore the unit back to operational condition.

The Service Center at PTI refurbished the recloser back to factory specifications, saving the customer replacement costs. A complete set of functional tests were performed after the leaning was completed. The recloser passed all high-potential withstand tests before it was shipped back to BC Hydro.

The Power of Partner Technologies

PTI began in 1989 as a small maintenance and repair shop. When PTI started manufacturing single phase distribution transformers, its expertise grew to the point of recognition as leading innovators of transformer technology.

Customers appreciate the opportunity to phone PTI's helpful staff to tap their knowledge of transformer technology. The responses are quick; the solutions, innovative. Operating with the flexibility and resourcefulness of a small company, PTI's more than 100 employees are ready to take on the world! Registered to the current version of ISO 9001 and

a registered patent, PTI is gaining the respect and business of international markets, including the United States, Caribbean, South America, Europe and Africa.

Like its expertise and reputation for manufacturing high quality transformers, Partner Technologies continues to grow.
